

How to Copy CD to CD

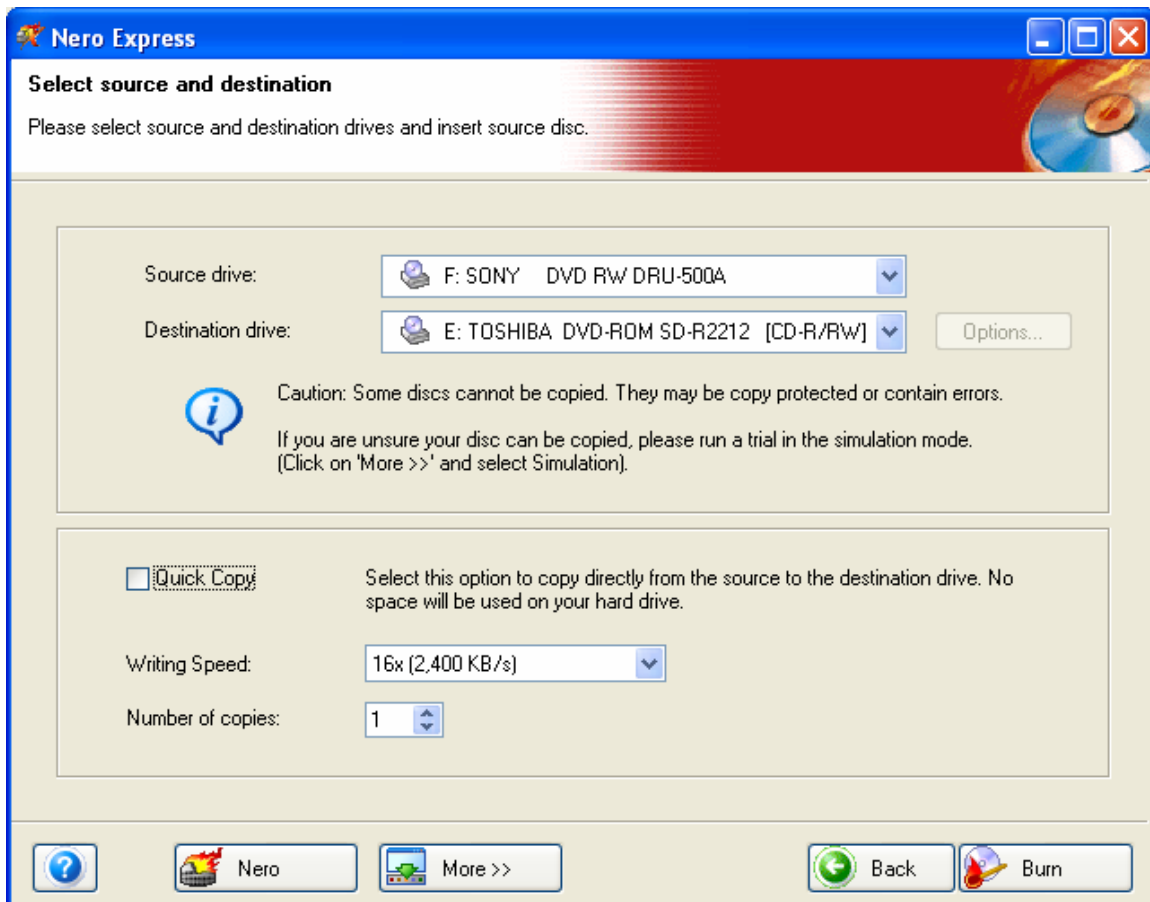

1. First to launch Nero StartSmart: Go to **Start->All Programs->Burn a CD or Data DVD->Nero StartSmart**. Or you can just go to **Start->Nero StartSmart**

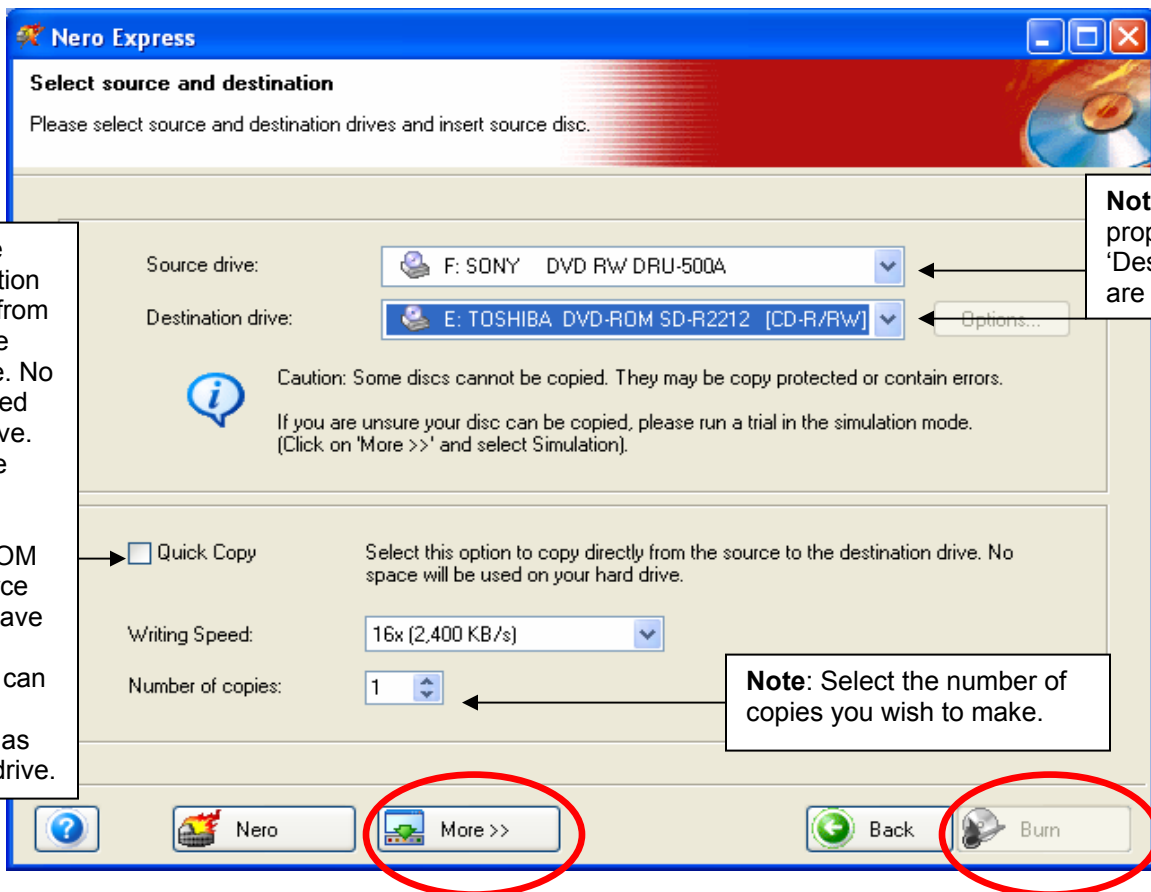

2. This will bring up the **Nero StartSmart** main window. Select the 'Copy and Backup' icon, and then click on 'Copy Disc' option.

3. This brings up the 'Nero Express' **Select source and destination** window.

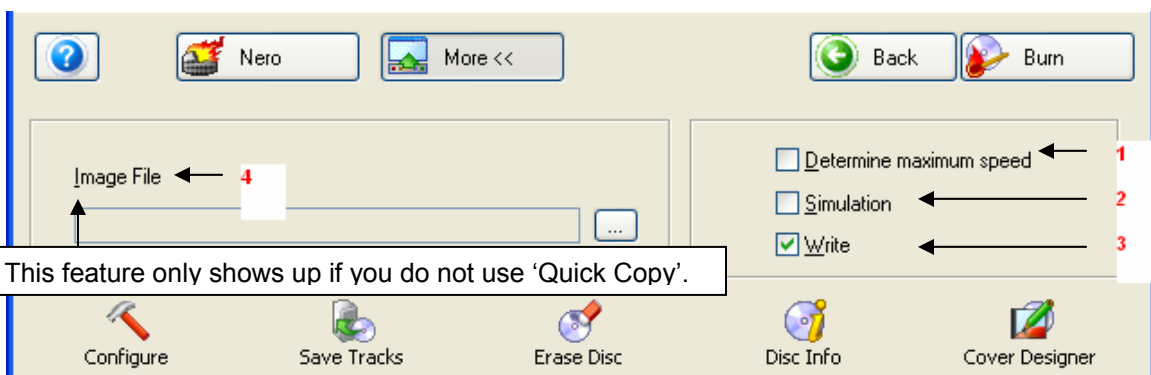

4. Place the disc you wish to copy, Music CD, Data CD, Video CD, etc. in the **Source drive** and place a blank CD in the **Destination drive**.

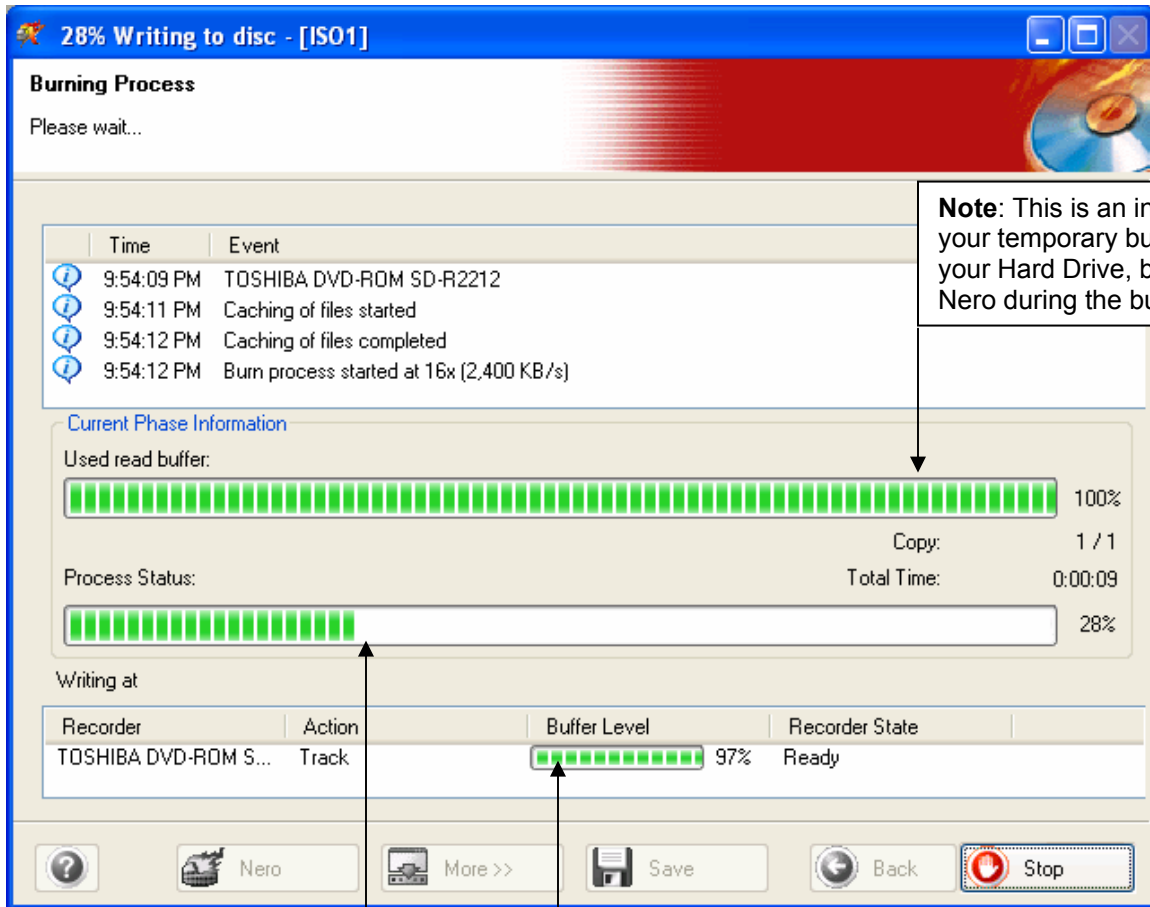

Click on '**More**', after you have placed your medium in the drives. Or click **Burn** to begin the Write operation to the CD.

5. If you selected '**Burn**', you will go to the final step; If you selected the '**More**' option, you will get a drop down for more added control of the write method used.
- 1) Determine maximum speed – The speed test determines how quickly the compiled files can be accessed. If the access speed is slower than the burning speed, the burning speed is reduced so as to avoid a poor or failed write operation.
 - 2) Simulation - The simulation runs all the steps involved in burning a medium apart from activating the laser beam, so that you can assume that if the simulation is successful, the burning process will also be successful. Use this to avoid wasting any CDR media on failed writes.
 - 3) Write - This checkbox starts the actual physical burning process.
 - 4) Image File – Use this option to select .ISO, .CUE, or .NRG image files and burn to CD.

6. Nero Express then begins the burn process.

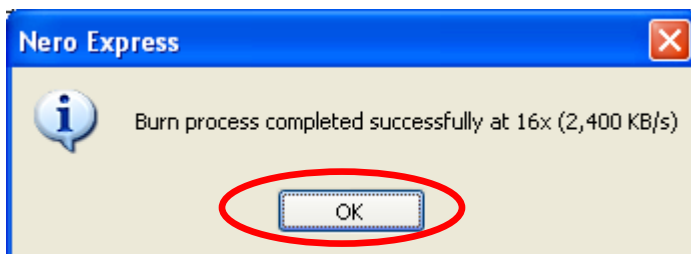

Note: This is an indicator of your temporary buffer level on your Hard Drive, being used by Nero during the burn.

Note: This is the progress bar of the actual write process

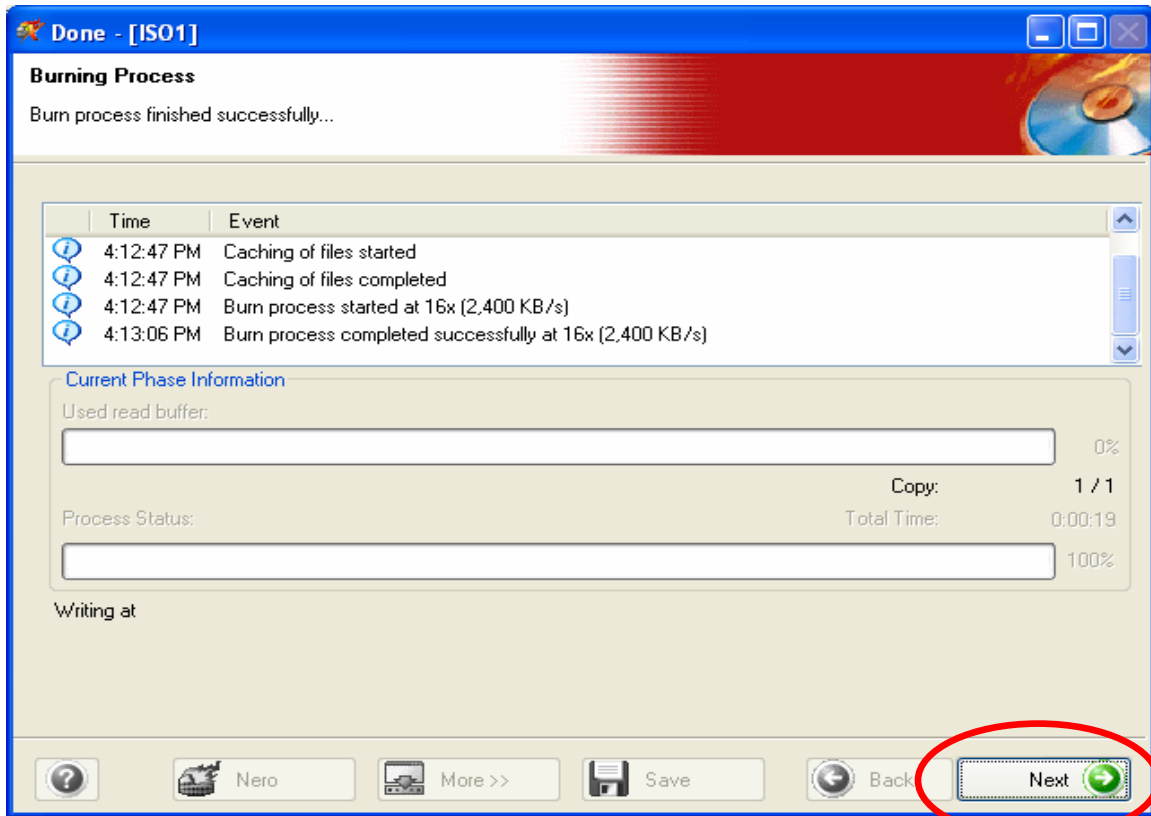

Note: This is an indicator of your buffer level on the Recorder.

7. When the write has been completed successfully, you will see the below window.

Click the **OK** button to continue.

8. This brings up the **Burning Process** window. Click on 'Next' to continue.

9. And this brings us to the completion of the CD copy process. Here you can choose too '**Burn the same project again**'; start a '**New project**'; launch the '**Nero Cover Designer**' to create a label; or '**Exit**' the Nero Express program.
